

Introducing Alja-Safe® **ACROBAT**®

Acrobat® is a fiber reinforced “non-sag” version of our original Alja-Safe® that is stronger when fully cured. Acrobat® is thicker and holds vertical surfaces allowing the user better control for making molds of the face, torso, etc.

Acrobat® reproduces **perfect detail** from all body surfaces and is good for making temporary body molds that can be used to make highly accurate reproductions cast in wax, plaster, Matrix® NEO®, Smooth-Cast® 300Q ultra-fast urethane resin and platinum silicone rubbers like Dragon Skin®.

EASY TO USE – The mix ratio is 1 part Acrobat® powder sifted into 1 part water (1A:1B by volume). The working time is 5 minutes; the cure time is 8 minutes (assuming a water temperature of 80° F / 27° C).

SKIN SAFE – Like our original Alja-Safe®, Acrobat® is **skin safe** and **does not contain crystalline silica (non-cancer causing)** so you can use Acrobat® without worrying about the safety of you or your model.
