

UVO[®] UV RESISTANT PIGMENTS

New UVO[®] Color Pigments for Urethanes and Epoxies are UV Resistant and Economical to Use

UVO[®] Color Pigments **resist the effects of ultra-violet light** and will add color to Smooth-On liquid urethane plastics, rubbers and foams as well as to Smooth-On epoxies. With 9 colors to choose from, they are **phthalate free**, concentrated (a little goes a long way) and easy to blend into any liquid urethane system. Unlike SO-Strong[®] Color Tints, which yield translucent castings, these are pigments and will generally yield opaque colored castings.

For maximum UV resistance, UVO[®] pigment should be used with a UV resistant material such as Crystal Clear[®] plastics or Clear Flex[®] rubbers. To improve the UV resistance of other urethane materials, you can add Sun Devil[®] UV additive.

Available in convenient and economical 9-Color Sampler Packs, 2 oz. squeeze bottles, pints and larger container sizes.
